

A more useful city conversation for international guests.

A pilot proposal for boutique hotels and travel designers who want to turn pre-arrival questions into considered, independent-travel decisions.

CITY DECISION LIBRARY / HUMAN-CHECKED ROADBOOKS / NO EXPERIENCE MARKETPLACE

THE OPPORTUNITY

International guests do not need another attraction list.

They need help deciding what fits their actual time, energy, interests and uncertainty before they arrive.

THE GUEST

"We have two days. What should we not miss?" often hides arrival fatigue, queue anxiety, rain, food needs and a fear of wasting China.

THE TEAM

Concierge teams are expected to answer quickly, but cannot safely promise access, availability, accessibility, private encounters or live operations.

THE DIFFERENCE

A Deeper China turns a vague question into a decision: what matters, what to remove, what to check and when to change the plan.

The result is not a tour. It is a clearer independent-travel experience, delivered through the partner relationship you already own.

Your guest relationship. Our city decision system.

1

Guest brief

Dates, real nights, priorities, constraints and what the traveler wants to avoid.

2

Decision library

Controlled city modules, questions, trade-offs, dynamic checks and output boundaries.

3

Human review

When dates are set, relevant changing details are checked and uncertainty is made visible.

4

Independent travel

Guests book directly. The partner retains its service, reservations and guest relationship.

No tour packaging. No hidden commissions. No private-access promises. No supplier marketplace before the evidence exists.

Three layers. Start with one.

01 CITY DECISION LIBRARY

A licensed internal toolkit: guest intent, follow-up questions, city modules, what to remove, and what staff must not promise. Best for concierge and travel-design teams.

02 GUEST BRIEF CONCIERGE

For a defined guest segment, A Deeper China converts a confirmed brief into a research direction or a human-reviewed roadbook within an agreed scope.

03 LIMITED-RELEASE LOCAL CONTEXT

Only later, and only when a local resource has passed consent, language, safety, practical and commercial review. Not a marketplace.

30-DAY PILOT

One guest segment. One city question. Three to five real briefs.

WEEK 1

Choose one question

Example: “How should a first-time international guest use two real days in Shanghai?”

WEEK 2

Configure the handoff

Brief form, 10 staff decision cards, escalation rules and guest-facing boundary copy.

WEEKS 3-4

Run the test

Three to five real guest briefs. Guests book directly; we observe actual friction and decision changes.

WEEK 5

Review and decide

Measure usefulness, human time, failures, customer feedback and whether a second city or segment is justified.

A small, accountable first engagement.

Pilot setup

US\$500-1,000 for brief design, staff adaptation and boundary setup. Fixed scope; no integration work included.

Per-brief human review

US\$49-79 for a standard city brief; US\$99-149 for a complex brief. Guests or partner decide the commercial arrangement separately.

Library license after the pilot

Indicative US\$1,200-2,500 per city annually, depending on internal users, update cadence and the agreed scope.

Every price is a test assumption, not a public rate. Local tax, consumer terms, data handling and contract terms must be agreed before a paid engagement.

NEXT CONVERSATION

Start with a question your guests already ask.

Not “what can we sell?” but “what are our international guests trying to decide when they arrive?”

A 20-MINUTE PILOT CONVERSATION

Choose one city, one guest segment and one real decision. We will define the smallest test that can teach us something.
